Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated Brackmann et al (US 4,953,570). Brackmann discloses a cigarette making hopper. The hopper comprises the claimed column 36 wherein a perforated plate deemed as element 32 is inclined towards a discharge duct as shown in figure 1 and detailed in Col. 5, lines 23ff. The separator/hopper is provided with an entry duct such as 114 and/or the duct formed by plate 32 and roller 34. The claimed feed pipe is deemed as the pipe shown in figure 1 providing the compressed air flowing through perforated plate 32. As for the upper mouth of the column, mesh conveyor 38 is moved substantially transversely to the vertical axis of the column 36 as shown in figure 1 and detailed in Col. 5, lines 27ff.

As for claim 2, it would be inherent that a suction system would overlay the conveyor belt 38 in order provide the noted suction in Col. 5, lines 27ff.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated Okumoto et al (US 4,607,645). Okumoto discloses a cigarette making hopper. The hopper comprises the claimed column 223 wherein a perforated plate deemed as element 215 is inclined towards a discharge duct 217 as shown in figure 2 and detailed in Col. 3,

lines 35ff. The separator/hopper is provided with an entry duct defined by plate 215 and roller 212. The claimed feed pipe is deemed as the pipe 213 shown in figure 2 providing the compressed air flowing through perforated plate comprising the claimed air diffuser, deemed as element 214. As for the upper mouth of the column, mesh conveyor 141 and '141 moves substantially transversely to the vertical axis of the column 223 as shown in figure 2 and detail in Col. 3, lines 40ff.

As for claim 2, suction system 141 would overlying the conveyor belt '141 in order provide the above noted.

As for claim 3, the air diffuser is element 214 noted as a regulating plate to make uniform the air supplied to the perforated plate.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references in PTO-892 not applied in the above rejections have been cited to show the state of the art.
